

# DEFENCE TANDARD CABLE

### TITLE:

Defence 16-2 Screened LSZH

#### CODE:

SFX/DS-16-2-12C-LSZH-BLK-1

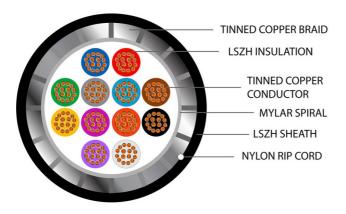

#### **DESCRIPTION:**

1m (per metre) Def Standard 16 x 0.2mm 12 Core TCWB Screened Black UV LSZH

#### SUPPLIED AS:

Per 1m Lengths

- Originally designed for military use, these cables are now widely used in many other industries and applications
- A robust, compact cable with high working voltage
- Low smoke zero halogen plastic is good for use inside public buildings and spaces as will not emit toxic gases if the cable catches fire
- These cables should not be used for mains connections
- Improved performance and protection against fire
- Uses include security, telemetry, data processing, process control, instrumentation, control equipment and aviation

| A <sub>ca</sub>     | Does not contribute to the fire                                       | Due to availability, it will be almost impossible for a cable to meet Aca, so they should only be specified with extreme caution.                                                                   | (S) SMOKE PRODUCTION (D) FLAMING (A) SMOKE ACIDITY                                                                                                                                                                            |  |  |  |
| Reaction to Fire    | e BS EN 50399                                                         |                                                                                                                                                                                                     | BS EN 50399/BS EN 61034-2 BS EN 50399 BS EN 60754-2                                                                                                                                                                           |  |  |  |
| B1 <sub>ca</sub>    | Minimum contribution to the fire                                      | It's highly unlikely the commonly-used cables will be classified to Class B1ca.                                                                                                                     | s1a: s1 + transmittance<br>>=80% (BS EN 61034-2)                                                                                                                                                                              |  |  |  |
| B2 <sub>ca</sub>    | Combustible, low flame spread & heat release contribution to the fire | Similar to Class Cca, although a lower acceptable heat release rate and burn measurement. In practice, this is likely to be the highest class cables will meet.                                     | s1b: s1 + transmittance<br>>=60% <80% (BS EN<br>61034-2) d1: Fall of droplets or a2: low acidity                                                                                                                              |  |  |  |
| Cca                 | Combustible,<br>moderate flame<br>spread & heat<br>release            | This is a more rigorous test than Class Dca, this is widely accepted across Europe as the 'go to' classification, but be aware, many cables do not meet Class Cca though availability is improving. | s1: Low production of slow propagation of smoke flaming particles that persist for less than 10 seconds, timed for 1200 seconds  s2: Intermediate (conductivity <10 µS/mm & pH >4.3)                                          |  |  |  |
| D <sub>ca</sub>     | Combustible,<br>moderate flame<br>spread & heat<br>release            | This classification has relatively little use or acceptance within specifying/contracting organisations. This is because no large scale fire growth is measured.                                    | production & propagation of smoke  s3: None of the above  d2: None of the above  d2: None of the above                                                                                                                        |  |  |  |
| Reaction to Fire    | Reaction to Fire BS EN 60332-1-2                                      |                                                                                                                                                                                                     |                                                                                                                                                                                                                               |  |  |  |
| E <sub>ca</sub>     | Combustible, limited fire spread of less than 425mm                   | A basic test for vertical flame propagation for a single insulated wire or cable using a 1 KW pre-mixed flame. Note: This test does not measure heat release, toxic fumes or smoke.                 | Visit us online: www.securiflex.co.uk                                                                                                                                                                                         |  |  |  |
| F <sub>ca</sub>     | Combustible, fire<br>spread of more than<br>425mm                     | Cables classified to Class Fca may have high levels of flammability due to the materials they are made of. This does not mean that the cable cannot be used, it is more likely to be used external. | Classes A to E have to be tested by an independent authorised laboratory. Most cables will fall into classes B2ca to Eca. For a cable to meet Aca, B1ca, B2ca or Cca, there also needs to be regular on-going factory audits. |  |  |  |
